Assignment 6B: Lo-fi & High-fi Prototypes

1. New Shopping Cart Page

In the prototype, I changed the color palette to dark and light gray with a little red to match CMU's Scotty dog logo. This page is the user's "shopping cart," which is a list of COVID testing or vaccination appointments made. Different from the previous design, I replaced the column "Details" with "Change," which would show a Cancel button when an appointment is present on that row and would show an Add button when an appointment is absent. The decision was made not only because I wanted to make the cancellation process simpler and faster, but also because I received peer review feedback suggesting that I could add a button that would direct the user to make the next appointment on this page. Inspired by my peers' work, a reminder that displays the number of current appointments was added next to the Appointment tab as well. Note that the number of appointments is limited to three and thus the size of the information box is fixed.

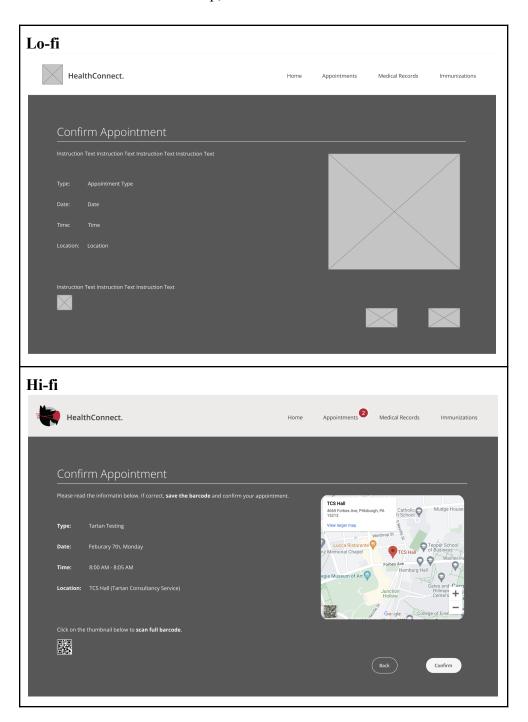

2. New Confirmation Page

A new confirmation page was also created to match the theme of the new shopping cart page. One of the major changes was that a new thumbnail of the barcode was created since the text and images were too clustered when the barcode was previously displayed in normal size. Hence, by using the jquery library, the user can simply click on the thumbnail and the barcode would be

shown in a bigger size for the user to scan. Next, note that the previous map image was replaced with the iframe embedded map, which is interactive.
